                         The present sequence is the protein sequence of GhANT1, a newly cidentified AINTEGUMENTA-like (ANT-like) polypeptide of cotton. The sequence was predicted from a cDNA clone (see ABN94485) isolated in a cotton DNA database screening. The invention provides nucleic acids cencoding ANT-like polypeptides comprising, in N-terminal to C-terminal cideraction, 2 AP2 DNA binding domains followed by an amino acid subsequence selected from those given in ABB79629-35. ANT-like polypeptides were identified in soybean, rice, cotton and corn (see ABB79636-41). Nucleic acids (see ABN94480-86) encoding the ANT-like polypeptides can be used in the construction of transgenic plants, ceapecially corn, soybean, canola, wheat, cotton, tomato or potato (all traits, such as increased size of plant organs. These plants are cespecially useful for production of ethanol or animal feedstuff
                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-AUG-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes an isolated nucleotide fragment (I) comprising a nucleic acid sequence (NS) chosen from a NS encoding a CC comprising a nucleic acid sequence (NS) chosen from a NS encoding a CC polypeptide (PP) having receptor-like protein kinase activity, mitogen activated protein (MAP)-kinase activity, LTPIS-like transcription factor activity and CKC-like transcription factor activity and CKC-like transcription factor activity. Also described: (1) cc complement (II) of (I); (2) a chimeric construct (III) comprising (I) or CC (III), operably linked to a regulatory sequence; (3) a plant (IV) and (5) cc comprising (III) in its genome; (4) seeds (V) obtained from (IV); and (5) cc oil obtained from (V). (I) or its part can be used in antisense inhibition or co-suppression in a transformed plant. (III) is useful for canbla, Brassica, sorghum, sunflower or coconut. (III) is also useful for creating transgenic plants sunflower or coconut. (III) is also useful for used as a hybridisation probe. Accomplete Accomplification of the present sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
    The present invention describes an isolated nucleotide fragment (I) comprising a nucleic acid sequence (NS) chosen from a NS encoding a CC comprising a nucleic acid sequence (NS) chosen from a NS encoding a CC polypeptide (PP) having receptor-like protein kinase activity, mitogen activated protein (MAP)-kinase activity, LIPIS-like transcription factor activity and CKC-like transcription factor activity and CKC-like transcription factor activity. Also described: (1) cc complement (II) of (I); (2) a chimeric construct (III) comprising (I) or CC (II), operably linked to a regulatory sequence; (3) a plant (IV) CC comprising (III) in its genome; (4) seeds (V) obtained from (IV); and (5) coll obtained from (IV). (I) or its part can be used in antisense collection or co-suppression in a transformed plant. (III) is useful for CC altering the oil phenotype in a plant such as corn, soybean, wheat, rice, canola, Brassica, sorghum, sunflower or coconut. (III) is also useful for creating transgenic plants having altered lipid profiles. (I) can also be used as a hybridisation probe. ACC00626 to ACC00888 and ABR40591 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             receptor like protein kinase; mitogen activated profein Lipp5-like transcription factor calessin; ATP ottrate ly CKC-like transcription factor; antisense inhibition: cotransgenic plant.
                                                                                                                                                                                                                                                                   Novel nucleotide fragment encoding polypeptides having receptor-like protein kinase activity, caleosin-like activity, useful for altering phenotypes in plants such as sunflower, coconut, soybean, wheat and a

The present invention describes an isolated nucleotide fragment (I) comprising a nucleic acid sequence (NS) chosen from a NS encoding a CC comprising a nucleic acid sequence (NS) chosen from a NS encoding a CC polypeptide (PP) having receptor-like protein kinase activity, mitogen CC activated protein (MAP)-kinase activity, LIPIS-like transcription factor contribution factor contribution factor activity and CKC-like transcription factor activity. SNF1-like CC complement (II) of (I); (2) a chimeric construct (III) comprising (I) or CC comprising (III) in its genome; (4) sequence; (3) a plant (IV); and (5) CC comprising (III) in its genome; (4) seeds (V) obtained from (IV); and (5) CC collobtained from (V). (I) or its part can be used in antisense CC contibition or co-suppression in a transformed plant. (III) is useful for CC campla, Brassica, sorghum, sunflower or coconut. (III) is also useful for CC creating transgenic plants having altered lipid profiles. (I) can also be CC used as a hybridisation probe. ACC00626 to ACC00868 and ABR40591 to invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2, Application US/09227421
Patent No. 6559357
Patent No. 6559357
GENERAL INFORMATION:
APPLICANT: Fischer, Robert L.
APPLICANT: Mizukami, Yukiko
APPLICANT: The Regents of the University of California
TITLE OF INVENTION: Methods for Altering Organ Mass, Controlling Feri
TITLE OF INVENTION: and Enhancing Assexual Reproduction in Plants
TITLE OF INVENTION and Enhancing Assexual Reproduction in Plants
CURRENT APPLICATION NUMBER: US/09/227,421
CURRENT APPLICATION NUMBER: US/09/227,421
PRIOR APPLICATION NUMBER: US/09/227,421
PRIOR FILING DATE: 1999-01-08
PRIOR FILING DATE: 1999-01-08
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 2
LENGTH; 555
TYPE: PRT
CRGANISM: Arabidopsis thaliana

Sequence 5, Application US/09479855

Patent No. 6639128

GENERAL INFORMATION:
APPLICANT: Fischer, Robert L.
APPLICANT: Mizukami, Yukiko
APPLICANT: Mizukami, Yukiko
APPLICANT: The Regents of the University of California
TITLE OF INVENTION: Methods for Altering Organ Mass, Controlling Fertility
TITLE OF INVENTION: and Enhancing Asexual Reproduction in Plants
FILE REFERENCE: 023070-090720US
CURRENT APPLICATION MUMBER: US/09/479,855
CURRENT FILING DATE: 2000-01-07
NUMBER OF SEQ ID NOS: 8
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 5
LENGTH: 548
TYPE: PRT
ORGANISM: Brassica napus
OTHER INFORMATION: cannola AINTEGUMENTA (ANT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś

Patent No. 5994622
GENERAL INFORMATION:
APPLICANT: Jothuku, K. Diane
APPLICANT: Okamuro, Jack K.
TITLE OF INVENTION: Methods for
COUNTRY; USA
ZIP: 94111-3834
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/700,152A
FILING DATE: 20-AUG-1996
CLASSIFICATION: 800
ATTORNEY/AGENT INFORMATION:
NAME: Bastian, Kevin L.
REGISTRATION NUMBER: 34,774
REFERENCE/DOCKET NUMBER: 023070-067200US
TELECHONNE: (415) 576-0300
TELEPHAN: (415) 576-0300
                                                                                                                                                                                                                                                                                                                                                                                 CORRESPONDENCE ADDRESS:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 1, Application US/09227421 Patent No. 6559357

```
GENERAL INFORMATION:
APPLICANT: Fischer, Robert L.
APPLICANT: Mizukami, Yukiko
TITLE OF INVENTION: Methods for Altering Organ Mass, Controlling Fertility
TITLE OF INVENTION: And Enhancing Asexual Reproduction in Plants
FILE REFERENCE: 023070-990700PC
CURRENT FILING DATE: 1999-01-08
PRIOR APPLICATION NUMBER: US/09/227,421
PRIOR APPLICATION NUMBER: US/09/227,421
PRIOR APPLICATION NUMBER: US/09/227,421
PRIOR FILING DATE: 1999-01-08
NUMBER OF SEQ ID NOS: 8
SOFTWARE: PatentIn Ver. 2.1
SEQ ID NO 1
LEMOTH: 2148
TYPE: DNA
ORGANISM: Arabidopsis thaliana
FEATURE:
NAME/KEY: CDS
LOCATION: (1269).. (1336)
OTHER INFORMATION: AINTEGUMENTA (ANT)
NAME/KEY: misc feature
LOCATION: (1309).. (1339)
OTHER INFORMATION: encodes first AP2 domain
NAME/KEY: misc feature
LOCATION: (1404).. (1414)
OTHER INFORMATION: encodes linker region
NAME/KEY: misc feature
LOCATION: (1405).. (1521)
OTHER INFORMATION: encodes second AP2 domain

; Sequence 3, Application US/08700152A
; Patent No. 5994622
; Patent No. 5994622
; Patent No. 5994622
; APPLICANT: Jofuku, K. Diane
APPLICANT: Okamuro, Jack K.
TITLE OF INVENTION: Methods for Improving Seeds
NUMBER OF SEQUENCES: 4
; CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
CITY: San Francisco
STATE: California
COUNTRY: USA
ZIP: 9411-3834
